

Vimpex Rescue Academy

Affordable training delivered at your site by world-leading experts

UK RO **idp** and IFE certified training courses

VIMPEX
Rescue Academy

What does the Vimpex Rescue Academy approach offer that others don't?

Your professional Rescue Service faces many challenges today, including ensuring that the learning and development tempo of those you employ is maintained in an operating environment of significant budgetary constraint. It's within this reality that we can help.

Created by acknowledged world leading technicians and training providers from the UK's top fire and rescue organisations, the Vimpex Rescue Academy has an essential role to play in the delivery of your ongoing training and development and offers you truly affordable world class expertise.

There's no shortage of training providers for rescue disciplines but our approach is different!

Put simply, we deliver; exceptional training underpinned by certificated content from World-leading experts at very economical pricing levels!

- All training is delivered **at your site** – maximising your investment in facilities and removing training down-time.

- Training is delivered **using your equipment and appliances** – ensuring that learning happens with equipment you have at your disposal and are familiar with.
- Each individual student is **professionally assessed** against established standards by World-leading experts and awarded Continuous Professional Development (CPD) with key institutions for attendance.
- Training is designed to the highest **professional standards** and approved by recognised leading bodies including the "Institution of Fire Engineers" and the "United Kingdom Rescue Organisation".
- Training is delivered by pre-eminent experts in each field.
- Vimpex Rescue Academy training solutions provide you with complete assurance that your technicians and officers can operate **safely, assertively and effectively** in all situations.

A Structured Approach

For all courses delivered, there is a clear and simple three-level progression from the Introductory Course - ensuring safety of both staff and casualties - developing competent use of equipment in ever-changing dynamic emergency situations, through to more complex skills and techniques designed to maximise the effectiveness of your rescue teams. For each subject area, there are additional specialist modules that can be tailored to fit the specific risks your organisation experiences such as rail, hazmat or large vehicles.

Introduction and Safe Working

Focusing on safe and effective operations:

- For those who have had limited experience of the tools and environment in which they will be used.

Technician

Developing skills including practical application of effective techniques;

- For users who have had some experience but perhaps limited formal training in how to optimise use of their tools and equipment and previously learnt techniques.

Advanced Technician

Building on skills developed over time;

- For those that wish to practice more advanced techniques and perhaps pass-on their skills to local colleagues.

Specialist Modules

Designed to follow-on from Introductory, Technician or Advanced Technician attendance, the range of modules use the expertise developed at each level and progress specialist skills appropriate to the risks faced by your service.

Module Example

Road Traffic Collision, Rescue & Advanced Technician

With major developments in car safety over recent years, today's emergency crews face far greater challenges and complexities in extricating casualties safely from vehicles.

As a provider of rescue services, it is vital that staff are fully aware of the latest technological updates and the impact they can have on fast and effective extrication and resulting outcomes for casualties.

The range of courses from the two-day Introductory "safe working" programme through to the more advanced four-day course are all designed to standards approved by the World Rescue Organisation (WRO). Courses are delivered in the English language by accredited trainers of the United Kingdom Rescue Organisation.

- » Safe Working - 2 days
- » Rescue Technician - 3 days
- » Advanced Technician - 4 days

Each course carries CPD – Continuous Professional Development points awarded and recognised by the Institution of Fire Engineers which will be recognised in the GCC and beyond.

This new range of courses focuses on:

- Exposure to latest developments in new vehicle technologies
- Principles of trauma care
- Casualty-centred approach - mini exercises to aid with incident commander decision making processes

Topics include:

- The Officer in Charge's responsibilities at RTC's
- Glass management and stability techniques
- New vehicle technology (e.g. electric and hybrid vehicles) and its impact on extrication techniques
- Extrication techniques
- The 'TEAM' approach
- Supplementary restraint systems
- Specialist RTC equipment

Vimpex Rescue Academy courses provide you and your team with an extremely cost-effective way of providing the very best and safest service to the public you serve, courses include:

Code	Course	Duration	*Minimum Delegates
RTC01	RTC - Safe Working	2 days	8 - 12
RTC02	RTC - Rescue Technician	3 days	8 - 12
RTC03	RTC - Advanced Technician	4 days	8 - 12
LGV01	Large Goods Vehicle Rescue - Safe Working	1 day	8 - 12
GM01	Glass Management	1 day	8 - 12
STAB01	Vehicle Stabilisation	1 day	8 - 12
HYB	Dual-fuel & electric vehicles	1 day	8 - 12
FDY01	Fire Dynamics - Introduction	2 days	8 - 12
FDY02	Fire Dynamics - Intermediate	3 days	8 - 12
FDY03	Fire Dynamics - Advanced	4 days	8 - 12
TI-01	Thermal Imaging	1 day	8 - 12
MoE-01	Methods of Entry	1 day	8 - 12
TacV-01	Tactical Ventilation	1 day	8 - 12

*Delegate numbers can be adjusted to maximise value from each course but teaching ratios will be a maximum of one Instructor for every six students

Basis of Training Provision

- Courses will be delivered at suitable local sites (fire / police stations are usually perfectly adequate). Facilities required will be explained at the time of booking and will include a suitable classroom with power and internet connectivity as well as an outside area for practical exercises.
- Courses will be delivered by a minimum of two instructors for up to 12 delegates then an additional instructor for additional people, increasing every 6 delegates.
- All Instructor expenses including accommodation and subsistence (food etc.) are included within course costs.
- Where training props (eg vehicles) will be required for a course or module, this will be explained at the time of booking. Local provision will be required.
- All practical training will be subject to an on-site risk assessment prior to delivery, findings will be recorded and retained but available for scrutiny if required.
- Assistance recommending/booking local accommodation may be sought (required standards will be explained during the booking process).
- All courses will be delivered in the English language but can be presented to facilitate local translation if required.
- Instructor VISA arrangements will be facilitated by the VimpeX Rescue Academy where necessary. Local sponsorship / support is required in certain countries but this will be made clear at the time of booking.
- All delegates will be provided with comprehensive course notes to support continuing professional development. Administration will be provided by the VimpeX Rescue Academy.
- Each course will be offered at a fixed price based upon eight delegates. Additional delegates (up to 12) do not incur further charges ensuring that the benefit of increased attendance falls completely to the trained organisation.
- Course costs will be agreed at the time of booking and will be invoiced in Pounds Sterling (£) payable by BACS transfer to the VimpeX Rescue Academy.
- Payment will be against fixed terms agreed at the time of booking. Typical stages include 50% in advance of delivery and the balance upon completion. Certificates will be issued on final settlement.
